## ABSTRACT OF THE DISCLOSURE

A lounge chair having a seat portion, an adjustable back portion rotatable about a transverse axis through roughly a 90° angle from upright to flat, and an adjustable supporting means associated with the back portion.

The lounge chair comprises means manually accessible by a person while seated on the seat portion to lower the back portion through any desired angle, the means preferably comprising a lever extending from the side of the seating area to the adjustable supporting means conventionally associated with the back to engage and reengage the supporting means to change the angle of the back.
